

LockMagic for Microsoft Word

Partial Document Encryption

Microsoft Word is a sophisticated word processing application designed for both business and personal environment. It is one of the most widely used software programs for document processing.

LockMagic allows you to enrich your experience with Microsoft Word by adding partial document encryption feature. During the process of creating content you have the opportunity to control its security from a single word, line and paragraph to the entire document. With a single click your sensitive private, personal and confidential information can be encrypted right inside Word. You no longer need to remember which documents need to be encrypted or use inaccurate and cumbersome post processing to tag and classify documents.

LockMagic is an easy-to-use identity-based encryption system enabling users to encrypt and secure files, documents and folders anywhere, and to share secure content with anyone by simply using their email addresses for authentication. It supports various identity systems including enterprise LDAP authentication services, as well as Internet-based identities such as Hotmail, Google, Yahoo or any other OpenID based systems.

'Partial' & 'Whole' Document Encryption

LockMagic *Whole Document Encryption* feature you can be used with *Partial Document Encryption* simultaneously for double encryption and added security and rich authorization.

Whole document encryption

Partial document encryption

A screenshot of a document window. At the top, a blue header bar contains the text "Encrypted Section". Below this, there are three lines of text, each consisting of a series of black dots. Below the dots, the text "LockMagic makes securing data easy" is displayed. Underneath, there is a numbered list of six items: 1. No passwords to remember, 2. Encrypts files on flash drive and network shares, 3. Enables Mobility of encrypted files that are accessible from any XP Pro or Vista machine, 4. Encryption technology from the largest software maker, 5. Runs from flash drive or network share without installation or administrative privileges, 6. Fully transparent.

LockMagic Authorization Model

LockMagic provides an identity-based access model with a role-based authorization model. Encryption is based on user and group identities and each document is assigned a single set of authorized users and groups along with their roles. Each identity (user or group) is assigned a role of either “Owner”, “Editor” or “Viewer”. The user role defines the set of actions the user can undertake on the encrypted section.

Each encrypted section is assigned a permission level controlling the different set of actions that can be taken by a given set of users. The permission level of an encrypted section maps to the user roles and each level has a set of pre-defined rights. The highest permission level maps to the “Owner” role followed by the “Editor” role and finally the “Viewer” role being the most restrictive. A user role must be equal or exceed a section assigned permission level in order to be able to decrypt it. Users assigned the “Owner” role have full control over all encrypted sections and manage user and group identities and roles.

Editor users can access encrypted sections assigned “Editor” or “Viewer” permission levels. Editors are prohibited from accessing encrypted sections assigned the “Owner” role as well as managing user & group identities and roles. Finally, viewers can only access encrypted sections assigned “Viewer” permission level and are prohibited from managing user identities and roles.

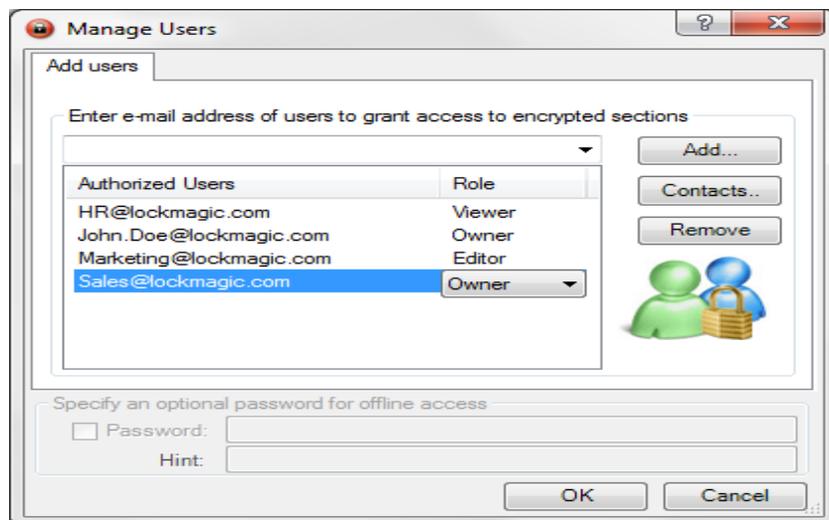

The following table outlines the user role permissions for each user action.

User Action	Owner	Editor	Viewer
<i>View</i>	Allowed	Allowed	Allowed
<i>Edit</i>	Allowed	Allowed	Prohibited
<i>Delete/Decrypt</i>	Allowed	Allowed	Prohibited
<i>Print</i>	Allowed	Allowed	Prohibited
<i>Edit Section Role</i>	Allowed	Allowed	Prohibited
<i>Manage Users</i>	Allowed	Prohibited	Prohibited

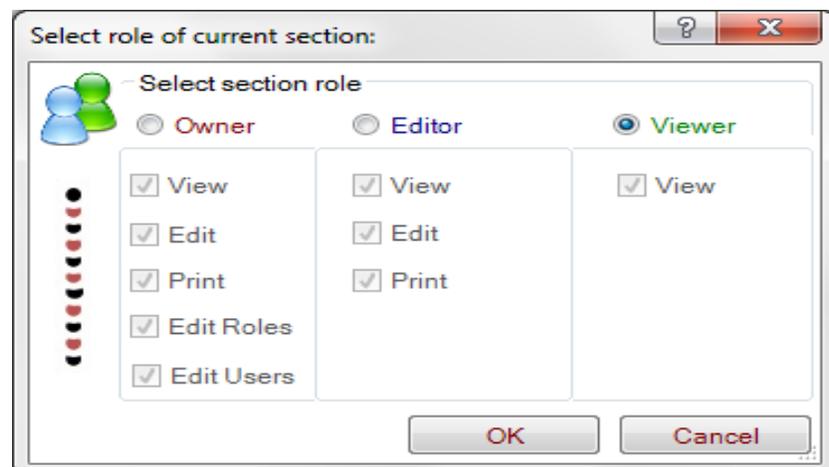

When a document author tries to encrypt the first section the user is prompted to specify the set of users and groups identities that are authorized to encrypt, decrypt and view the secure content.

Each user is also assigned one of the three pre-defined roles – “Owner”, “Editor”, “Viewer”. User roles control the set of actions that can be taken by the user on each encrypted section.

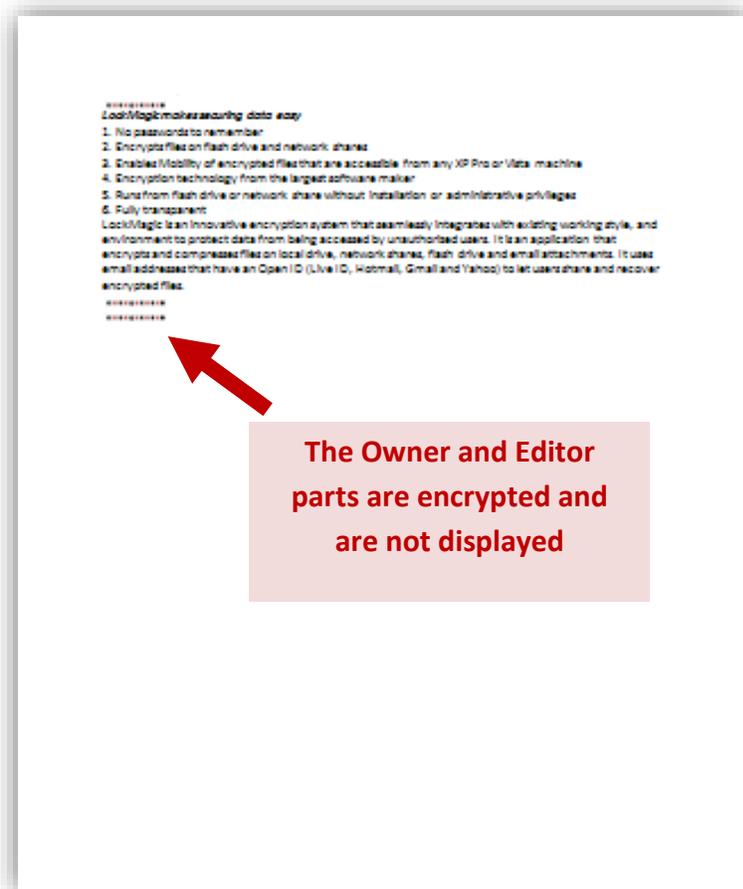

Next, the user is prompted to specify the encrypted section role authorization information. Each section is assigned a single role – “Owner”, “Editor” or “Viewer”.

“Viewer” View Of The Document

A user or group with **Viewer** Role can only see the encrypted section enabled with the viewer permissions.

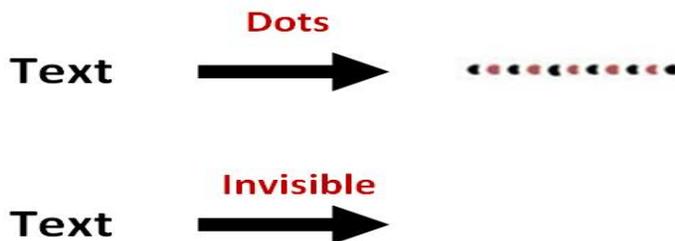

But I don't want the people to know that I have hidden encrypted information within my document!

Piece of cake! With LockMagic this is done in one easy step!!

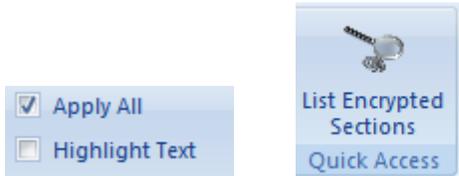

You can manage how your encrypted content appears. All you have to do is choose the sections you want to hide and LockMagic does the rest!

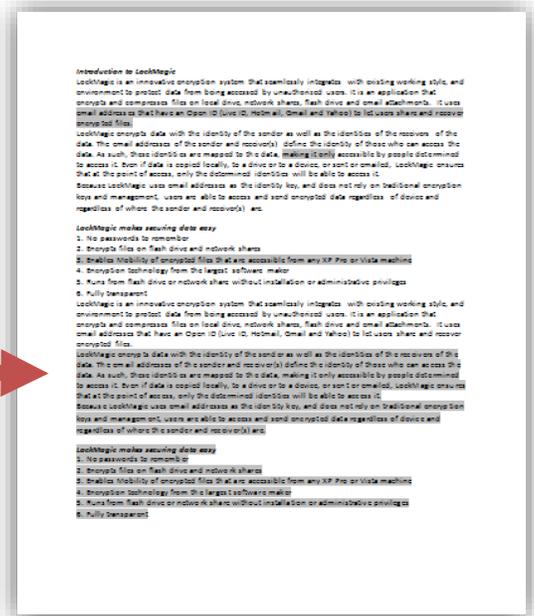

My document contains thousands of pages! How will I be able to locate my encrypted content?

LockMagic allows you to do this in many ways! For example you can view your encrypted content on a list sorted by each section's permissions. Or you can simply highlight all the encrypted content within your document. All of this is done with one easy step.

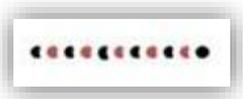

Encrypted text can be highlighted

No one will know how much data you have actually hidden from them; it doesn't matter whether you encrypt one word, one line or a thousand pages! It all can be invisible or looks the same with LockMagic.

A single word

A Thousand pages

Are encrypted sections visible when I print out the document?

With LockMagic there are no complications! The way you want your document to be viewed is the way it's going to be printed out. If you want to print the document with all encrypted sections visible then simply press 'Show' with 'Apply All' option checked. Then print out the document as any normal document.

However, if you want to hide your encrypted sections then simply press 'Hide' with both 'Apply All' and 'Hide Marker Image' options checked. When you print out the document all encrypted sections are invisible and as such not printed out.

Remember, you also have control over who can and cannot print out your document.

Summary

With LockMagic sharing documents with other people is easier and more secure because LockMagic gives you control over each part of your document. It enables you to define how a single person or group of people interacts with different part of your document.
